

### APPLICATION

The DT-4572 Down Converter is the ultimate in high performance and cost effective X-Band frequency conversion. The DT-4572 can be used for SCPC, DAMA, and TDMA, as well as full transponder HDTV and analog TV. Spectral purity and stability characteristics fully meet or exceed the requirements of all domestic, international, and regional commercial satellite networks.

### HIGH GAIN

The DT-4572 has +20 dBm minimum output level at the 1 dB compression point and 45 dB of gain as a standard. This capability permits longer cable runs to the modem rack or compensates for elaborate splitting networks without adding expensive options such as external line amplifiers.

### LOW PHASE NOISE

The phase noise performance of the DT-4572 exceeds the Intelsat phase noise mask for IBS and IDR services by more than 9 dB. This allows phase dependent demodulators to perform better. The close-in phase noise is very low, making the converter ideal for low bit rate digital circuits such as those used in DAMA hub earth stations.

### REMOTE CONTROL

The remote control interface is selectable between EIA-232 and EIA-485. All configuration control, status retrieval, and adjustments are available as simple ASCII commands through the serial interface or through the front panel menu. As a cost option, the remote control command structure can be customized in order to accommodate existing network control software.

### DETACHABLE RF/IF CONNECTOR MODULE

Each DT-4572 is equipped with a detachable module that establishes input and output connections for the RF and IF paths. The module inserts into a rear compartment of the converter, and requires no additional outside space. The module includes Type N connectors for the RF path and BNC connectors at 50 or 75Ω for the IF path.

### DAISY CHAIN REDUNDANCY SWITCHING

The converter uses CEFD's proprietary "Daisy Chain" integrated switching technology. The Daisy Chain design removes the relays associated with a centralized protection switch tray and distributes them across the individual converters. CEFD was awarded patent 5,666,646 on this distributed protection switch topology.

Daisy Chain technology successfully eliminates a central switching chassis, two power supplies, a microprocessor, and several long, costly cables. Widely accepted in the industry, CEFD's Daisy Chain provides both pricing and marketing advantages.

### MINIMUM RACK SPACE

Due to its small rack height (1.75 inches) and the elimination of the space penalty paid for a separate 1+N switch chassis, the DT-4572 and the Daisy Chain switch architecture provide the most compact and cost effective converter subsystem available. The units are ideal for the construction of transportable systems such as "flyaways," and high capacity earth stations where space utilization and economy are prime considerations.

## Frequency Range

	7250 to 7750 MHz
Conversion	Dual, No Inversion
Step Size	125 kHz standard, 1 kHz optional
Preset Channels	32 Frequencies and gains
Stability Over Time	$\pm 1 \times 10^{-3}$ /Day
Stability Over Temp	$\pm 1 \times 10^{-3}$ 0 to 50°C (32 to 122°F)

## RF Input

Input Level	-45 dBm Typical
Return Loss	20 dB Minimum with RF/IF Connector Module
Impedance	50 Ohms
Noise Figure	11 dB Maximum at 0 dB Attenuation

## IF Output

Level	+20 dBm at 1 dB Compression
Range	52 to 88 or 104 to 176 MHz Optional 50 to 60 MHz or 100 to 180 MHz (see Note 1)
Non-carrier Spurious	-80 dBm
Carrier Spurious	-65 dBc at 0 dBm Output
Intermodulation	-80 dBc at 0 dBm Output SCL
Impedance	50 or 75 Ohms
Return Loss	23 dB Minimum with RF/IF Connector Module or SW Module

## Transfer

Gain	45 dB $\pm$ 2 dB
Attenuation Adjust	0 to 20 in 0.25 dB Steps 0.1 dB Steps Optional
Gain Stability	$\pm$ 0.25 dB/Day
